At Network Recycling Inc. we work with refineries and industrial manufacturers across North America to identify and optimize solutions for the management of their waste materials in a safe and economic manner. Our service package includes customized transportation and logistics services for hazardous and non-hazardous wastes and by-products. We have over 30 years of experience safely transporting industrial wastes from their point of origin to facilities where they are reclaimed, recycled or regenerated.

Put our expertise to work for you in the following areas:

- Spent Catalyst Recycling
- Metal recovery from wastes & by-products
- Alternatives for wastes with little value that would otherwise be directed to a landfill

Working to our refinery customers’ change-out schedule, we provide a wide range of services to facilitate the entire logistical chain — from generator to destination including:

- Regulatory
- Customs Clearance
- Material Containment
- Transportation
- Hands on Management
- Consignment

Spent Catalyst Logistics

NRI specializes in spent catalyst logistics services. We ensure that refineries’ spent catalysts are safely packaged and moved from their point of origin to facilities where they are reclaimed, recycled, or used as raw materials in alternate processes.

Metal Recovery and Recycling

NRI is proud to manage thousands of tons of waste material and by-products safely and effectively each year. Our strong network of relationships facilitate the ability to deal with a vast array of metal bearing by-products. Some materials have direct recycling applications, while others may require blending with additional materials to create feedstocks.
